### ABB motors Low voltage general performance motors M2000 Cast Iron Frames

We provide motors and generators, services and expertise to save energy and improve customers' processes over the total lifecycle of our products, and beyond.

### Making you more competitive

ABB has been manufacturing motors for over 100 years. Our products are designed to be reliable, efficient and cost effective, and we can supply motors for practically any application. A full range of services is available through our worldwide service organization, with the latest eBusiness systems providing round-the-clock access, easy ordering and fast delivery.

### M2000 motors

Our M2000 range offers quality motors in the eff2 class, providing you with the ideal efficiency level for your needs. And our 24-hour availability helps make your life easier. Through our extended support and services such as eBusiness solutions and an efficient global stock concept, we provide you with easy ordering and quick delivery.

### The Leader in Motors

ABB is a global engineering and technology group serving customers in electrical power generation; transmission and distribution; automation; oil, gas and petrochemicals; industrial products and contracting; and financial services. The product range includes a full range of industrial electric motors, both AC and DC, LV and HV meeting the needs of most application, with virtually any power rating.

Within the Group, ABB Motors is the world's leading manufacturer of low-voltage induction motors, having over 100 years experience and a presence in more than 100 countries. ABB Motors's broad understanding of customer applications enables it to work closely to solve individual problems or to supply custom-designed motors for any project-no matter how demanding.

For customers, this all represents a solid value and commitment revealed in the dependable quality of ABB Motor's products and in its unrivalled customer service and back up. The hallmarks of its products are efficiency, robustness and reliability, combined to represent the best value available. Customers the world over rely on ABB Motors as the most solid and reliable supplier of electric motors. But above all, ABB Motors values its customers.

The best value is also enhanced by ABB Motors's worldwide customer service network guaranteeing fast delivery, rapid response and local back-up, as well as by worldwide ABB Service network supporting the after sales service.

ABB Motors has manufacturing facilities in Finland, Italy, Spain, Sweden, China and India. The comprehensive Motor stocks at each of these sites are reinforced by large and versatile stocks at Central Stock Nordic in Vasteras, Sweden; Central Stock, Europe in Menden, Germany and Central Stock Asia in Singapore, and by numerous distribution stocks.

### Industrial

As a key element of its business strategy, ABB has committed to a broad program of product development and positioning under the Industrial umbrella. This initiative is geared towards increasing integration of ABB products as the "building blocks" of larger solutions, while incorporating functionality that will allow multiple products to interact seamlessly as components of real-time automation and information systems.

Motors and generators represent one of the fundamental building blocks in the Industrial  $^{\rm IT}$  architecture.

ABB (www.abb.com) is a leader in power and automation technologies that enable utility and industry customers to improve performance while lowering environmental impacts. The ABB Group of companies operates in around 100 countries and employs about 107,000 peoples.

### **Technical features**

The new M2QA series of three phase induction motors are a member of the ABB M2000 family with EU efficiency class. The motors are designed and manufactured according to the international standards of IEC34, IEC72, DIN432673, BS4999, AS1359, GB10069, and Q/JBQS27. The electrical and mechanical performances of ABB M2QA motors are excellent and keeping long.

### **High efficiency**

The output power 1.1kW-90kW 2P and 4P, in S1 duty, M2QA motors are among the class 2 of CEMEP-EU standard, saving energy and operating costs.

### Voltage ranges of extra versatility

A wide range of voltages can be up to max. 690 V for 50 Hz and 60 Hz available.

### **Reliable windings**

To ensure long lifetime, the windings are made of the latest available materials in class F protection and temperature rise limited to class B (80k) in standard motors.

### International motor efficiency standards

A worldwide energy efficiency classification system now exists for low voltage three-phase asynchronous motors. This system increases the level of harmonization in efficiency regulations around the world.

International Electrotechnical Commission (IEC) standard IEC/EN 60034-30:2008 defines energy-efficiency (IE code) classes for single speed, three-phase, 50 and 60 Hz induction motors. The standard is part of an effort to unify motor testing procedures and efficiency and product labeling requirements to enable motor purchasers worldwide to easily recognize premium efficiency products. The efficiency levels defined in IEC/EN 60034-30 are based on test methods specified in

### IEC/EN 60034-2-1:2007

IEC/EN 60034-2-1, which came into force in September 2007, introduces new rules concerning the testing methods to be used for determining losses and efficiency. It offers two ways of determining efficiency; the direct and indirect methods. The standard specifies the following parameters for determining efficiency using the indirect method: -reference temperature -three options for determining PLL (additional load losses): measurement, estimation and mathematical calculation. The resulting efficiency values differ from those obtained under the previous IEC testing standard, IEC 60034-2:1996. It must be noted that efficiency values are only comparable if they are measured using the same method.

- reference temperature
- three options for determining PLL (additional load losses):
- measurement, estimation and mathematical calculation.

The resulting efficiency values differ from those obtained under the previous IEC testing standard, IEC 60034-2:1996. It must be noted that efficiency values are only comparable if they are measured using the same method.

### Efficiency testing standad IEC/EN 60034-2-1:2007

Direct methodIndirect method:

- Measurement; PLL calculated from load tests
- Estimation; PLL at 2.5% 1.0% of input power at rated load between 0.1 kW and 1000 kW
- Mathematical calculation; Eh star
- alternative indirect method with mathematical calculation of PLL

Winding losses in stator and rotor determined at  $[25^{\circ}C + actual temperature rise measured]$ 

### Bearings with high load capacity

All motors are provided with deep-groove ball bearings as standard and they are designed for long lifetime is extended. Cast iron motors in sizes 71-225 are greased for life and motors in sizes 250-355 have a regreasing device as a standard.

### Strong corrosion protection

The motors are made to withstand aggressive environment as standard and they are designed for long lifetime. For motors with regreasing, they have strong and effective protection against corrosion.

### Low niose level

An important objective in our design work is to minimize the noise level. And we have been successful.

### **Additional windings protection**

Fix thermistors(PTC), them-switches, anti condensation heaters on request.

IEC/EN 60034-2-1:2007.Efficiency testing standad IEC/EN 60034-2-1:2007 Direct methodIndirect method:- Measurement; PLL calculated from load tests- Estimation; PLL at 2.5% - 1.0% of input power at rated load between 0.1 kW and 1000 kW- Mathematical calculation; Eh star – alternative indirect method with mathematical calculation of PLLWinding losses in stator and rotor determined at [25°C + actual temperature rise measured]To promote transparency in the market, IEC 60034-30 states that both the efficiency class and efficiency value must be shown on the motor rating plate and in product documentation. The documentation must clearly indicate the efficiency testing method used as the different methods can produce differing results.

### IEC/EN 60034-30:2008

IEC/EN 60034-30:2008 defines three International Efficiency (IE) classes for single speed, three-phase, cage induction motors.

- IE1 = Standard efficiency (EFF2 in the former European classification scheme)
- IE2 = High efficiency (EFF1 in the former European classification scheme and identical to EPAct in the USA for 60 Hz)
- IE3 = Premium efficiency (identical to "NEMA Premium" in the USA for 60 Hz)
- IE4 = A future level above IE3

Efficiency levels defined in IEC/EN 60034-30 are based on test methods specified in IEC/EN 60034-2-1:2007.

Compared to the former European efficiency classes defined by the CEMEP agreement the scope has been expanded.

IEC/EN 60034-30 covers almost all motors (for example standard, hazardous area, marine, brake motors)

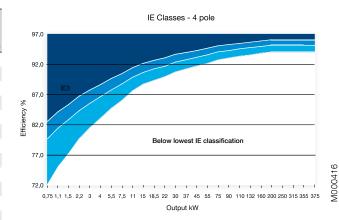

- Single speed, three-phase, 50 Hz and 60 Hz
- 2-, 4- or 6-pole
- Rated output from 0.75 to 375 kW
- Rated voltage UN up to 1000 V
- Duty type S1 (continuous duty) or S3 (intermittent periodic duty) with a rated cyclic duration factor of 80 % or higher
- Capable of operating direct online

The following motors are excluded from IEC 60034-30:

- Motors made solely for converter operation
- Motors completely integrated into a machine (for example, pump, fan or compressor) that cannot be tested separately from the machine

### Minimum efficiency values defined in IEC 60034-30:2008 standard (based on test methods specified in IEC 60034-2-1:2007)

### **ABB and efficiency standards**

ABB determines efficiency values according to IEC/EN 60034-2-1 using the low uncertainty method i.e. indirect method, with additional load losses determined by measurement.

ABB has a full range of IE2 motors – with many available from stock – and a broad range of IE3 motors.

As the world market leader, ABB offers the largest range of LV motors available. It has long advocated the need for efficiency in motors, and high efficiency products (EFF1 in the former European classification scheme) have formed the core of its portfolio for many years.

### **Mechanical design**

### Totally enclosed, fan cooled IP55

Heavy duty design, manufactured from extra corrosion resistant cast iron materials to be used in all kind of environment. The motor is mechanically very strong and robust and as standard designed for additional energy saving through frequency converter drives.

### Flexible cable entry direction

Terminal boxes are mounted on the top of the motors, right or left. Terminal boxes of motor size 71-132 can rotate  $4x90^{\circ}$ , and those of 160-355 can rotate  $2x180^{\circ}$ . All are easy to refit.

### Powerful refit available

The motors satisfy the requirements of a wide range of environments and applications, such as improving protection, insulation level, regreasing facilities, dust-proof, sealing rings, rainproof are available, a full range of options are listed in page 13.

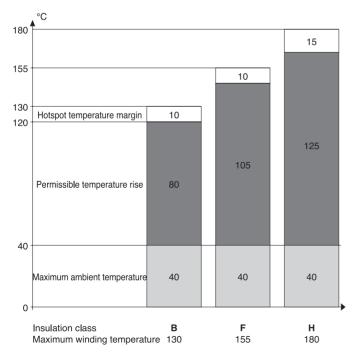

### Insulation and insulation classes

According to IEC60085, insulating materials are divided into insulation classes. Each class has a designation corresponding to the temperature that is the upper limit of the range of application of the insulating material under normal operating condition.

The winding insulation of a motor is determined on the basis of the temperature rise in the motor and the ambient temperature. The insulation is normally dimensioned for the hottest point in the motor at its normal rated output and at ambient temperature of 40°C. Motors subjected to ambient temperatures above 40°C will generally have to be derated. In most cases, the standard rated outputs of motors from ABB Motors are based on the temperature rise for insulation classes B. Where the temperature rise is according to class F, this is specified in the data tables.

However, all the motors are designed with class F insulation, which permits a higher temperature rise than class B. The motors, therefore, have a generous over-load margin. If temperature rise to class F is allowed, the outputs given in the tables can generally be increased by about 12 %

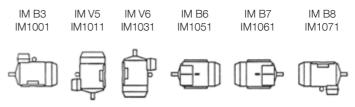

Temperature limits are according to standards. The extra thermal margin when using class F insulation with class B temperature rise makes the motors more reliable.

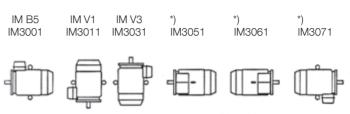

Safty margins per insulation class

### **Mounting arrangements**

### **Bearings and terminal boxes**

The motors are normally fitted with single-row deep groove ball bearings as listed in the table below. Degree of protection of the standard terminal box is IP55. The motors are supplied with 2 cable entries as standard according to the table below.

Terminal boxes are mounted on top of the motor. The terminal box of moter sizes 71 to 132 can be turned  $4 \times 90^{\circ}$  and in motors sizes 160 to 355 rotated  $2 \times 180^{\circ}$ .

### Permissible loadings on the shaft end

The tables below give the permissible radial force in Newton, assuming zero axial force. The values are based on normal conditions at 50 Hz and calculated bearing lives for motor sizes 71 to 355 of 20000 hours and 40000 hours.

Motors are foot-mounted IM B3 version with force directed sideways. In some cases the strength of the shaft affects the permissible forces.

At 60 Hz the values must be reduced by 10%. For two-speed motors, the values must be based on the higher speed.

Permissible loads of simultaneous radial and axial forces will be supplied on request.

If the radial force is applied between points X  $_{\circ}$  and X<sub>max</sub>,the permissible force F  $_{R}$  can calculated form the following formula: F  $_{R=Fxo}$ -X/E (Fxo-Fxmax) E=length of shaft extension in basic version

### Permissible axial forces

The Following tables give the permissible axial forces in Newton, assuming zero radial force. The values are based on normal conditions at 50 Hz with standard bearings and calculated bearing life time of 20000 and 40000 hours.

At 60 Hz the values are to be reduced by 10% For two-speed motors, the values are to be based on the higher speed. The permissible loads of simultaneous radial and axial forces will be supplied on request.

Given axial forces  $\mathsf{F}_{\mathsf{AD}},$  assumes D-bearing locked by means of locking ring.

### **Ordering information**

### Sample order

When placing an order, the motor type, size and product code must be specified. The product code of the motor is composed in various way, in accordance with the following examples.

A M2QA	B 100L2A	C 3GQA	10	1	501	] -	D, A	E, D	F	+	G 033	
		1-4	5-6	7	8-10	11	12	13	14	15	16	
A Motor type B Motor size	C Product of D Mounting	code I arrangement code	Э		Voldtage and frequencies Generation code	uency coo	de	G	Variant c	codes		

### Explanation of the product code (C,D,E,F) :

### Positions 1 to 4

M2QA = Totally enclosed fan cooled squirel cage motor with cast iron frame

### Positions 5 and 6

IEC frame		
07 = 71	13 = 132	25 = 250
08 = 80	16 = 160	28 = 280
09 = 90	18 = 180	31 = 315
10 = 100	20 = 200	35 = 355
11 = 112	22 = 225	

### Position 7

Speed (pole pairs)			
1 = 2 poles	6	=	12 poles
2 = 4 poles	7	=	>12 poles
3 = 6 poles	8	=	Two-speed motors for fan drive motors for
4 = 8 poles			constant torque
5 = 10 poles	9	=	Multi-speed motors, two-speed

### Position 8 to 10

Serial number

### **Position 11**

- (dash)

### Positions 12

Mounting arrangement

- A = Foot-mounted, top-mounted terminal box
- R = Foot-mounted, terminal box on RHS, seen from D-end L = Foot-mounted, terminal box on LHS, seen from D-end
- B = Flange-mounted, large flange
- C = Flange-mounted, small flange size (71-112)
- H = Foot-and flange-mounted, terminal box top-mounted
- J = Foot-and flange-mounted, small flange with tapped holes
- S = Foot-and flange-mounted, terminal box RHS seen from D-end
- T = Foot-and flange-mounted, terminal box LHS seen from D-end
- V = Flange-mounted. special flange
- F = Foot-and flange--mounted. Special flange

### **Positions 13**

Voltage and frequency

- Single-speed motors
- B 380 V 50Hz
- D 400 V / 690VY 50Hz, 460V 60Hz
- E 500 V 50Hz
- F 500 VY 50Hz

S 230 V / 400VY 50Hz, 460VY 60Hz

- T 660 V 50Hz
- U 690 V 50Hz

X Other rated voltage, connection or frequency, 690 V maximum

### Remark

For voltage code X the variant code 209 non-standard voltage or frequency (special winding) must be ordered.

### **Positions 14**

Generation code A, B, C, ...

Positions 15

+ (plus)

**Positions 16** Variant codes

The product code must be, if need, followed by variant codes: Please see page 15-16.

S = Standard motor

R= On requestNA = Not applicableP= New production of a motor

# M2000 Cast iron motors - totally enclosed squirrel cage three phase motors

# Lubrication

Motor sizes 71-225 are fitted with bearings that are regreased for life. For size 250-355 are equipped with bearing that are regreasable via grease nipples.

# Insulation

Phase insulation and generous electrical dimensioning give the motor a high overload capacity. (Suitable for frequency converter drive)

# Endshields, flanges The endshield and different

The endshield and different variants of flanges are of cast iron.

# Bearings

The motor sizes 71-132 are fitted with enclosed DDU C3 bearings as standard. The frame sizes 160-225 are fitted with enclosed 22 bearing as standard. Sizes 250-355 have regreasable bearings as standard. Modern design secure high load capacity run.

# Terminal box

The spacious terminal box of cast iron makes the motor quick and easy to connect. The terminal box of motor sizes 71-132 can be turned 4x90 degrees and for sizes 160-355 it is possible to turn the terminal box 2x180 degrees. As standard the terminal box is on top of the motor but it is also possible in some sizes to get it on either right or left hand side at customers request.

# Rotor winding

The rotor winding is made of pressure diecast aluminium, a design that provides high starting capacity and low noise level.

## Low noise level The high efficiency of the motor means that a smaller, quieter fan can be used.

# Corrosion protection Effective corrossion protection

Effective corrossion protection means that the motor can be used in all environments.

00

# Stator

The stator is made of cast iron, including feet, which make the motor mechanically very strong and robust. Integrally cast iron feet allow a very rigid mounting and minimal vibration.

### ABB Motors' total product offer

ABB offers several comprehensive ranges of AC motors and generators. We manufacture synchronous motors for even the most demanding applications, and a full range of low and high voltage induction motors. Our in-depth knowledge of virtually every type of industrial processing ensures we always specify the best solution for your needs.

### Low voltage motors and generators

Process performance motors for more demanding applications

- Cast iron motors
- Premium efficiency motors
- NEMA motors

### Industrial performance motors

 flexibility for most customer applications

- Aluminum motors
- Steel motors
- Cast iron motors

### General performance motors

- out-of-the-box simplicity for

### high volume customers

- Aluminum motors
- Cast iron motors

### Motors for hazardous areas

- Flameproof motors
- Increased safety motors
- Non-sparking motors
- Dust ignition proof motors

### Marine motors

- Aluminum motors
- Steel motors
- Cast iron motors
- Open drip proof motors

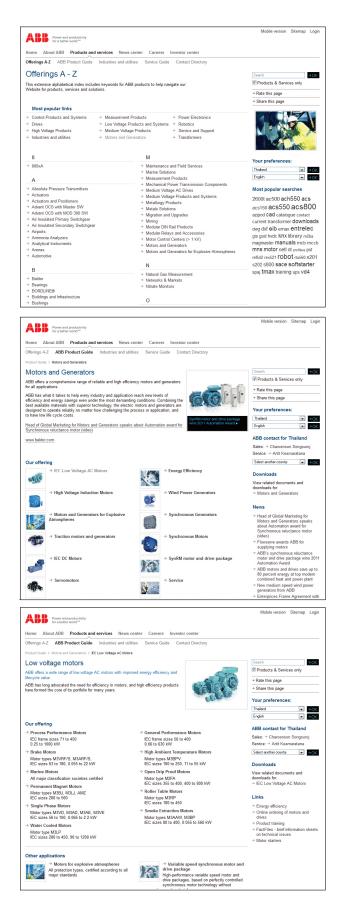

### Motors for additional applications

- Open drip proof motors
- Brake motors
- Single phase motors
- High ambient motors
- Permanent magnet motors
- High speed motors
- Wind turbine generators
- Smoke venting motors
- Water cooled motors
- Motors for roller table drives
- Servomotors

### High voltage and synchronous motors and generators

- High voltage cast iron motors
- Induction modular motors
- Slip ring motors
- Motors for hazardous areas
- Synchronous motors and generators
- DC motors and generators
- Wind turbine generators
- Traction motors
